Installation of any item is easier if the vehicle is clean and free of debris. **Approximate Installation Time:** 20 Minutes

(Arrow points to inside of vehicle.)

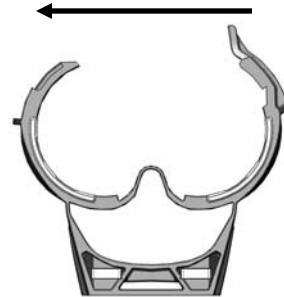

Fig. 1

INSTALLATION INSTRUCTIONS

Note: Do not use a power drill to assemble the windshield.

1. Refer to Fig. 2. Align all four snap clamps with the mount holes on the inside of the windshield. The snap clamps should be aligned so the hook portion is facing the inside of the vehicle, as shown in Fig. 1. Loosely install all four snap clamps onto the inside of the windshield using (8) screws.
2. Install the short strips of trim onto the middle of the lower bent portion of the windshield to prevent the windshield from scratching the hood.
3. Align the windshield with the RGR front cab frame and hood. Push the snap clamps onto the frame bars. Squeeze the clamps to ensure they have fully snapped in place.
4. Tighten all hardware once desired fitment is reached.

IMPORTANT: Do not use glass cleaners and solvents such as ammonia, alcohol, and petroleum distillates

Maintenance: Periodically check all fasteners for tightness and re-torque as required.

Cleaning:

1. Use an indirect high pressure water supply to rinse the large dirt particles from the windshield.
2. Once the majority of dirt is removed, use warm soapy water and a cotton terry cloth to wash all windshield components.
3. Rinse thoroughly and allow to air dry.
4. Use a quality polish such as Plexus® or Novus II® to clean and remove fine scratches from the windshield.
