## Customize

Tap to customize up to five gauge screens and choose the ride and vehicle information for each.

**Gauge Screens**  
Press the gauge button to cycle to the next configurable gauge screen.

**Maps**  
Press the map button for topo maps with your waypoints and tracked rides, navigation, and to join a group ride with friends.

**Phone**  
Press the phone button to connect your phone or headset via Bluetooth to make phone calls and send messages.

**Apps & Controls**  
Press the Polaris button for access to all apps, vehicle controls, and settings. Press and hold for 5 seconds to restart the display.

**Music**  
Press the music button for access to AM, FM, weather, USB, and Bluetooth media streaming. Use and to adjust volume. Hold to mute.

## Update Map and Trails

- 1 On your personal computer, go to: [ridecommand.polaris.com/display](http://ridecommand.polaris.com/display)
- 2 Select the vehicle display and **Download** map of your desired region.
- 3 Transfer the file onto a USB drive, and connect it to the USB cable on vehicle.
- 4 Follow instructions on the website to finish updating the map and trails\*.

\*The map and trail data are updated daily.

## Update Software

### Over-the-air Update

- 1 Connect to Wi-Fi or personal hotspot on the vehicle. If a new software update is available, a notification will be shown.
- 2 **Download** and **Install**.

The update could also be installed from a USB drive, see: [ridecommand.polaris.com/display](http://ridecommand.polaris.com/display)
